

Fall 2019 Certificate Tracking Booklet

SRA INTERNATIONAL

**2019 ANNUAL
MEETING**

OCTOBER 19 - 23
HILTON SAN FRANCISCO

Clinical Trials and Research Administration

The Clinical Trials Research Administration ("CTRA") Certificate delivers intensive training sessions specifically designed to provide an understanding of the critical elements of successful administration of a clinical trials research program. The program has been redesigned to cover the critical elements of clinical trials management for research administrators and to more effectively integrate with other SRAI certificate offerings. The CTRA curriculum examines issues relevant to both National Institutes of Health-sponsored and industry-sponsored clinical trials. Much of the material is explored through experiential learning activities from seasoned research administrators including case studies. Elements of the curriculum include protocol review, recruitment, negotiation of agreements, development and negotiation of budgets, compliance, billing, international studies, and risk management and analysis.

Financial Management

The financial research administration series is designed for new and intermediate administrators responsible for providing financial support on a pre- or post-award basis. The certificate content is also applicable to mid- and upper-level administrators who assume oversight responsibility for financial management of sponsored program activity and to support staff responsible for developing financial and compliance management systems. The certificate provides an understanding of the regulatory foundation for the direct and indirect costing of sponsored program activity, financial management decision-making and system development.

Introduction to Research Administration and Management

Ideal for someone new to the profession or as a refresher for a more seasoned research administrator, The Introduction to Research Administration and Management certificate explores the broad scope of the multi-faceted profession of research administration. The comprehensive curriculum - developed by some of the "best of the best" instructors in the field provides an overview and introduction to the broad field of research administration and management. Elements of the curriculum include understanding the environment and context within which research administration is conducted as it relates

to such diverse areas as research law, research ethics, fiscal management, regulatory compliance, sponsored program administration, and pre- and post-award management.

Leadership

Individuals generally get selected into leadership positions because of strong technical skills; however, they excel in these positions based on their ability to interact successfully with others and communicate in effective ways. There is a need to understand one's self and work to develop strong competencies in others.

The comprehensive curriculum, developed by knowledgeable and successful leaders in the research administration, provides an overview and introduction to the communication and other necessary skills to lead research administration and management offices. Elements of the curriculum include personality and leadership assessments and sessions in conflict management, change, delegation, diversity communication skills and using metrics to help with team effectiveness.

National Institutes of Health Grants Fundamentals

The certificate in National Institutes of Health Grants was produced by SRA International for the benefit of its members who manage NIH grants. It was produced solely by SRA International, and is not an official program of the NIH.

The NIH Grants Management certificate provides a foundation in grants from the National Institutes of Health (NIH). As the NIH is the single largest federal grant-awarding agency, the program is perfect both for someone new to research administration and for research administrators expanding their knowledge of federal funding agencies. The curriculum—anchored by the full-day workshop, "NIH Fundamentals"—provides an overview to the procedures and policies essential to preparing successful applications to and managing grant awards from the National Institutes of Health.

Practice of Research Administration and Management

The PRAM certificate focuses on the supervision and organization of research activities from an organization management perspective. The core The certificate includes content that is relevant for research managers who are generally at a Director or higher-level within an organization and covers the broad range of activities comprising research operations.

Pre-Award

The best preparation for a successful funding decision is the solid planning and preparation on a variety of issues needed to submit a high-quality competitive proposal. The work of pre-award research administrators prepares the way for successful implementation of the funded project. The Pre-Award certificate provides instruction on the broad scope of responsibilities for research administrators who work with investigators to plan, develop and prepare grant proposals for submission, and who trouble-shoot with various agency personnel, institutional administrators and investigators to ensure all issues are clarified before an award is made. The program features workshops and sessions on finding and disseminating funding opportunity information, proposal development and submission, budget preparation, award review and acceptance, post-submission communications, the responsible and ethical conduct of research, eRA systems and other relevant topics.

Research Development

The Research Development certificate is designed for specialists who work with researchers to improve the number, size and quality of their grant proposals, and who participate in the development of strategies and practices to enhance and expand the institution's research agenda. The certificate's aims are: 1) to support new and ongoing initiatives that will grow the institution's position in sponsored research; 2) to provide strategic direction and expert support for the institutional research enterprise; 3) to develop investigator capacity to submit more and better individual proposals; 4) to improve the success rate of

content for the certificate emphasizes: leadership development, research administration staffing and management, research and faculty development, innovation and economic development, and integrity and stewardship. proposals submitted by the institution, especially those targeted to larger, more complex grant programs.

Research Integrity

The Research Integrity certificate provides a foundation for identifying, understanding and addressing the complex ethical dimensions of conducting research. Those completing the certificate program will have obtained a basic understanding of topics associated with research integrity—including cultural aspects, goals for facilitating research integrity and strategies for creating an institutional culture that values ethical and responsible practices in research. Topics addressed may include data ownership and management, social responsibility, animal welfare and human subjects protection, peer review, collaboration, mentoring, authorship, research misconduct, international research and conflict of interest and commitment.

Research Law

The "theory of everything" (TOE) is a hypothetical theory studied in theoretical physics that is intended to fully explain and link together all known physical phenomena. The Research Law certificate is similar to TOE in that it attempts to explain and link together all known issues of research administration. Legal issues arise throughout research, starting with intellectual property issues, continuing through contract and grant matters, and living on in post research licensing, "derivative works disputes" and post-clinical trial liability questions. The Research Law certificate is for both new research administrators who need a basic approach for recognizing the legal issues that they will face daily and for the more experienced administrator who works with general counsel and outside attorneys on a daily basis. Because there are so many legal issues in research, the curriculum is very broad and constantly changing to address new issues confronting scientists, research administrators and their attorneys.
